DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 are drawn to integrated circuit classified in class 257, subclass 382.
- II. Claims 19-26 are drawn to a method of fabricating a contact structure on a silicon substrate, classified in class 438, subclass 300.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the titanium layer is deposited through the PECVD process, but the layer could be formed through the LPCVD process. This can be found in the reference, U.S. Patent No. 5,44,006 in Col. 1 Lines 11-22.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
